Attachments: 20190711 Form1A LW103 CH4 Exceedance.pdf (476.24 kB)

Hello Keith and Steve,

Please find attached HPI Notifications for the LW Return CH4 exceedance.

Additional information regarding the Methane management at Grosvenor:

- * Methane Drainage – Grosvenor held a meeting yesterday to assess the business plan risks and risks posed by inadequate gas drainage capabilities at Grosvenor. The current expansion plan to increase our gas drainage capabilities from 9000l/s to 1300l/s was assessed and recommended that Grosvenor increase gas drainage capacity to 1500l/s to allow for an unconstrained production profile. The current plan is to increase the gas drainage capacity to 1300l/s before the end of 2019 (LW104 Startup).
- * Ventilation – Ventilation change planned for Tuesday 16th that will reverse the ventilation in the Bleeder road and reduce the intake methane levels onto the LW face by 0.3% CH4.

Please let me know if you have any additional questions.

Kind Regards

Wouter Niehaus
